

SOLAR

Solar Home NEW

Solar Home is a solar-powered variation on our popular Home Pro cordless table lamp. It is available in two sizes, regular (20") and L (40"). Solar home lamps are battery powered and fitted with a solar panel, dusk and motion sensors, and a stake for easy ground installation. When the dusk sensor detects an ambient brightness of less than 150 Lux, the lamp switches on 50% of its full brightness. A motion sensor activates the lamps at full power when movement is detected. The die-cast, aluminum frame is available in two powder-coated finishes: dark gray and rust.
